Education

Ph.D., Economics, May 2018 (expected)

University of Arizona, Tucson, AZ

Dissertation Title: *“Investigating the Economic Consequences of Atmospheric Nuclear Testing”*

M.A., Economics, August 2012

Miami University, Oxford, OH

B.A., Economics, May 2011

Summa Cum Laude

Wittenberg University, Springfield, OH

Research

Research Fields:

Environmental Economics, Economic History

Working Papers:

“Measuring Policy’s Role in Mediating Responses to Agricultural Productivity Shocks” (*Job Market Paper*) [Paper link.](#)

“Some Unintended Fallout from Defense Policy: Measuring the Effect of Atmospheric Nuclear Testing on American Mortality Patterns.” [Paper link.](#)

“In the Shadow of the Mushroom Cloud: Nuclear Testing, Radioactive Fallout and Damage to U.S. Agriculture.” [Paper link.](#) (*Under Review*)

“Paralyzed by Panic: Measuring the Effect of School Closures during the 1916 Polio Pandemic on Educational Attainment.” *Coauthored with Melissa Thomasson. NBER Working Paper 23890. (Under Review)* [Paper link.](#)

Research in Progress:

Measuring the long run consequences of in-utero and childhood exposure to iodine-131.

Studying the effects of the 1954 Salk Polio Trial using county level trial information.

U.S. county level cause of death panel construction for 1946 to 1958.

U.S. agriculture policy panel construction, 1933 to 1990.

Fellowships, Grants, & Awards

Economic History Association Cambridge Press Dissertation Fellowship, \$10,000	2017
National Science Foundation Dissertation Grant Number SES 1658749, \$14,975	2017
University of Arizona GPSC Travel Grant, \$750	2017
University of Arizona, Department of Economics Travel Grant, \$300	2016
University of Arizona, Department of Economics Travel Grant, \$300	2015
Economic History Foundation Exploratory Data and Travel Grant, \$2,500	2015
University of Arizona 2 nd Year Paper Award, \$250	2015

Teaching Experience

University of Arizona. Tucson, AZ

Sole Instructor of Record:

ECON 200 Online: Basic Economics Issues. (Winter 2016)

ECON 330: Macroeconomic and Global Institutions and Policy. (Summer 2015 and Summer 2016.) [Syllabus](#)

Teaching Assistant:

ECON 200: Basic Economics Issues. (Fall 2013, Spring 2014, and Spring 2015.) [Syllabus](#)
[Student Evaluations](#) and [Student Comments](#)

Overall Teaching Effectiveness Scores

Winter 2016 (Online): 57 students, 4.06/5.00

Summer 2016: 19 students, 4.12/5.00

Summer 2015: 19 students, 3.71/5.00

Miami University. Oxford, OH

Teaching Assistant:

Supervisor: Dr. Norman Miller. (Fall 2011 and Spring 2012.)

Dissertation Summary

“In the Shadow of the Mushroom Cloud: Nuclear Testing, Radioactive Fallout and Damage to U.S. Agriculture.”

In the first chapter of my dissertation, I measure the direct effects of radioactive fallout from Nevada Test Site activities on agricultural production in the Great Plains and Midwest. This paper uses a novel dataset measuring county level radioactive fallout deposition for each test conducted from 1951 to 1958 at the NTS. By aggregating these data to the annual level, I can use within county variation in fallout exposure across years to study the agricultural effects of atmospheric nuclear testing at the NTS. I find fallout induced yield reductions, caused land abandonment, and decreased livestock inventories. This paper estimates the magnitude of the effects and suggests that pollution resulting from atomic testing led to billions of dollars of lost output (in 2016 \$) from 1951 to 1970. Wheat losses totaled to approximately 1/3 of the sample's 1945-50 average total yearly output. Corn losses totaled to approximately 2.5 times the sample's 1945-50 average total yearly output.

“Measuring Policy’s Role in Mediating Responses to Agricultural Productivity Shocks”

The second chapter of my dissertation uses the unanticipated nature of radioactive fallout to study how farmers respond to productivity shocks. During the period of nuclear testing, the public was generally unaware that they were being exposed to radioactive material created hundreds to thousands of miles away. As such, radioactive fallout depositing on farmers’ fields would have been uncorrelated with any adaptive actions or investments agricultural producers made. Using a two stage least squares framework, I measure how farmers adjust their planting decisions in response to adverse productivity shocks in the previous year.

I find that wheat specific “use-it or lose-it” government policies that regulated future production based on past production histories caused farmers to increase wheat cultivation in the years following fallout induced productivity shocks. This behavior was an attempt by farmers to offset the negative effects of a (potentially) tightening policy constraint. From 1952 to 1959, wheat producers planted 2.6 million additional acres of wheat (approximately 17 million acres of wheat were planted on average from 1945-50). Corn producers, who were not subject to a policy constraint, treated fallout induced productivity shocks as transitory. Contemporary agricultural policies, such as crop insurance, are implemented in part based off agricultural producers’ past production histories. The climate change and agricultural literature has been relatively agnostic regarding the role policy plays in shaping adaptive responses to temperature shocks. My results suggest that policy incentives can fundamentally shape producer responses to productivity shocks and can alter the estimated social cost of disruptive events.

“Some Unintended Fallout from Defense Policy: Measuring the Effect of Atmospheric Nuclear Testing on American Mortality Patterns.”

My third dissertation chapter studies how nuclear testing at the NTS affected U.S. public health and the geographic and temporal extent of the harm. This chapter combines data from U.S. Vital Statistics with measures of radioactive Iodine-131 exposure. I-131 is an isotope that entered the food supply and that was ingested in large quantities. I find that fallout from nuclear testing led to persistent and substantial increases in overall mortality for large portions of the country. The largest mortality effects appear in areas of the Great Plains and Midwest, which are regions not studied in the medical and scientific literature. My estimates suggest that nuclear testing at the NTS contributed to approximately as many deaths as the bombings of Hiroshima and Nagasaki. The cumulative death toll attributable to nuclear testing is seven to fourteen times larger than previous estimates by the National Cancer Institute.

Chapters in Progress

“Measuring the Long Run Consequences of In-Utero and Childhood Exposure to Iodine-131.”

The fourth chapter of my dissertation uses state level variation across birth year cohorts in the 2000 Census and the county level variation across birth year cohorts in the NLSY79 to test if in-utero exposure to I-131 adversely affected adult outcomes related to health, income, or education. The data application for the NLSY79 geocodes is in progress.

“The Evolution of Cancer Mortality from 1946 to 1988”

The fifth chapter in my dissertation uses annual county level cause of death records from U.S. Vital Statistics and U.S. death certificates to study the geographic and temporal effects of NTS fallout on cancer mortality rates. A preliminary county year panel has been constructed for the years of 1946 to 1958.

Research Experience & Other Employment

University of Arizona. Tucson, AZ

Research Assistant. Supervisor: Price Fishback. 2015 – Current

Kettering Foundation. Dayton, OH

Contracted Research Associate. 2012 – 2013

Miami University. Oxford, OH

Research Assistant. Supervisor: Dr. Dennis Sullivan. 2015 – 2012

Wittenberg University. Springfield, OH

Undergraduate Research Assistant. Supervisor: Dr. Bin Yu. 2010 – 2011

Invited Seminars & Conferences:

2017

All UC Economic History Graduate Student Workshop. Davis, CA.

CU Environmental Economics Workshop. Vail, CO.

Agriculture and Applied Economics Association Annual Meeting. Chicago, IL.

NBER Summer Institute: Development of the American Economy. Boston, MA.

8th World Congress of Cliometrics. Strasburg, FR.

Association of Environmental and Resource Economists Conference. Pittsburgh, PA.

Population Association of America Annual Meeting. Chicago, IL.

Agricliometrics III Conference. Cambridge, UK.

NC-1034 Food, Energy, Environment, & Economics Workshop. Tucson, AZ.

Allied Social Sciences Association Annual Meeting. Chicago, IL.

2016

Western Economic Association International Conference. Portland, OR.

2015

Economic History Association Annual Meeting. Nashville, TN.

Professional Associations

American Economic Association, Economic History Association, Cliometric Society, Association of Environmental and Resource Economists, Population Association of America, Agriculture & Applied Economics Association
